True, Real-Time, timekeeping solutions for today's business.

RDT 100/200 Series Employee Access Terminals

RDT 100 Series

A true extension of the computer hosting TimeClock Plus, whether on a PC, network server or wireless lan, the RDT 100 Series Employee Access Terminal is a real-time ethernet (TCPIP) timeclock which can be desk or wall mounted in an area easily accessible to all employees, allowing them to perform any necessary clock transaction, without physical access to a computer. Available in many models, the RDT 100's flexibility is unmatched in the Time & Attendance industry.

Each model interfaces with the TimeClock Plus database in real-time, instantly writing critical employee data directly to the confines of your computer hard disk, ensuring that your employee information is protected appropriately. Management enjoys the availability of true, virtually 'up-to-the-second' on-screen or hard copy information required to accurately control labor costs in today's hectic workplace. Also, under real-time clock operation, there is no threat of lost data during power failures as with stand-alone devices.

RDT 200 Series

The RDT 200 Series is a highly intelligent addition to our industry leading concept of real-time labor tracking, and it removes all the pre-conceived barriers to the deployment of real-time labor tracking. Network down-time causing the disruption of employee time and attendance tracking is no longer a concern.

The RDT 200 boasts the ability to function in both online and offline modes. This means that in the event that normal real-time communication between the RDT 200 and its host is lost, the RDT 200 will begin taking steps to correct that state. If unsuccessful, the RDT 200 will automatically begin accepting transactions in offline mode, and will continue to do so until it recognizes the connection has been reestablished. At that point, all punches collected will be immediately delivered to the TimeClock Plus database, and those records will be flagged as offline punches for tracking purposes.

Available with: 10/100 Ethernet
Serial RS-232

Choose from a variety of employee access devices

> Basic Pin Punch
> Magnetic Badges
> Bar Code Badges
> Proximity Badges
> Biometric Fingerprint Recognition
> Biometric Hand Recognition
> Digital Output for Access Control
> Auxiliary Device Support

Using TimeClock Plus™ as the host, real-time employee access terminals can be mounted in and around the work area, or across the country for easy employee access with NO POLLING necessary!
